Florida's southwestern estuaries, mangrove wetlands, historic rivers, and productive uplands comprise one of the largest ecosystems of its kind in North America. Punta Gorda takes immense pride in its ecological riches. Inland, its green-tree canopy shades city streets and residential districts. Surrounding the city, maritime and coastal habitats support over 600 species of birds, fish, and marine wildlife. Punta Gorda's ecosystem is

managed in partnership with state and federal scientists to accommodate a wide range of active and passive uses. Accessible parks and preserves, boat launches, and picnic areas invite family excursions. Fish for the 40-inch snook; catch-and-release the silver king tarpon.
