Interesting Tidbits (IT) Tips:

Do you have a UPS? An uninterruptible power supply is a large battery that can keep your computer running for about 20 minutes after a sudden power outage. Its purpose is to give you a chance to save what you are working on rather than lose it due to the sudden power loss. Not only can it save City equipment from a power surge, but it can keep you from losing data. Every computer in the City is supposed to be plugged in to one of these.

If you do not have one, simply create a helpdesk ticket!
